

ORDERS READY RIGHT ON TIME.
EVERY TIME.

TIME IS MONEY. SAVE BOTH WITH THE PANASONIC IQ DRIVE-THRU TIMER

For Quick Service Restaurants, every second in the drive-thru counts. Our cutting edge timer technology uses an intuitive graphic touch interface so you can see real-time enhanced car statistics with just a tap. Need to take your numbers to go? Time-specific printed reports are in-hand in seconds directly from your connected POS printer.

The greeting timer and window timers are large and clearly visible so employees can get the timing they need in just a glance. The Panasonic iQtimer counts transactions by the hour and, for a multiple-store owner, reports averages can be accessed remotely so you have direct insights into how your business is performing no matter where you are. Plus, data-based historic traffic predictions establish benchmarks and help you identify larger scale performance trends so you can measure the growth of your business.

INFORMATION IN LIVING COLOUR.

Bright, easily identifiable colours are one of the most effective ways for us to quickly process complex information. An easy-to-read visual traffic light system keeps workflows moving with simple green, yellow and red indications to track success of real-time progress.

Using a one-of-a-kind innovative colour scheme, waiting cars appear in different colours based on their status, wait-time or response-time threshold. A manager or operator can quickly and easily see real-time alerts and respond to keep things moving.

STAY ON TOP OF YOUR SUCCESS.

Our unique Success Meter keeps your team on track with visual tracking to let them know what percentage of orders are successfully meeting your target completion times. Plus you can inspire some friendly competition and goal setting within the fully customizable main display with the optional Competition Leaderboard.

UNMATCHED CUSTOMIZED SUPPORT

We're in this with you. Whether you're running a single cafe or responsible for a lineup of locations, we know you have a lot on your plate. The last thing you need is a giant serving of technological troubleshooting.

We're here to help. Our support services are ready to handle the heavy lifting for you and show what a true technology partner can bring to the table. We can take on project management, procurement and installation. Our teams can integrate systems, manage IT and provide 24-7 support so you can stay focused on running your business and serving your customers—instead of focusing on technology.
